LM IPL Advantage:

Project Life Cycle Support: LM IPL functions not just as supplier but as project partner guiding the consumer through the various stages during the project cycle. Apart from Engineering, Procurement & Commissioning (EPC), we also support on right sizing the project, financing, O&M support post the contract period.

Optimization of EPC cost: Individually each project size is small but as we have a large number of projects, it allows us to strategic partnerships and leverage in procurement which translates to lowering of EPC costs, resulting in better quality & optimized costs.

Economy of scale in operation and maintenance costs: Power production, even through solar requires certain specific operations and maintenance processes, which incur costs. At times, these costs are unaffordable for smaller projects but because of our portfolio, our per over-head costs are optimized. This translates to better services, lower maintenance costs.

Advantages of specialization: Our dedication to power production through solar has brought in specialization of these processes, as a result, your plant is always maintained at optimum performance and prime condition.

Smart Add-ons: We offer smart add-ons on the project based on client requirement, including:

- ✓ 24*7 Real Time Remote Monitoring (On Desktop & Mobile)
- ✓ Flexible O & M Support contracts.
- ✓ Performance Guarantee in terms of unit production
